TEMPORARY STORAGE & ENVIRONMENTAL PRODUCTS SUMMARY

Canflex USA Inc. is a major U.S. Manufacturer of high frequency welded products made with special **high strength coated fabrics** such as polyester, nylon, and kevlar. All of our products are **collapsible** and can be folded for **easy storage** and transportation. All tanks can be used to transport or store a wide variety of liquids including , but not limited to ,potable water, oil , jet fuel ,diesel fuel, waste water, sewage , oil spill and ballast water. CANFLEX also offers **custom products** made from coated fabrics and complete systems including off load pumps and power packs.

CANFLEX "SEA SLUGS"

These Ocean Towable Bladders are used for oil spill recovery ,and bulk liquid storage . These tanks are primarily used on water but can also be used for liquid storage on land. Special material coatings are available for these bladders to be used in many environments, such as storage and transport of **Drinking water, Fuels or Waste** products.

The bladders are very rugged units with a cylindrical main body and matching conical ends , giving them great towing characteristics.

The Sea Slug is equipped with rectangular shaped flotation panels on each side.

The rectangular shape of our floats dampen any attempt by the bladder to roll from side to side while under tow or in seaway.

Size range from 5 to 650 m³ (1320 to 170,000 gallons) or large.

OFF LOAD PUMPS AND POWER PACKS

CANFLEX offers a **complete offload system for our CANFLEX "SEA SLUGS"** which includes adaptation plates for the assembly of submersible off load pumps c/w power packs. These positive displacement Archimedes / centrifugal screw submersible pumps have **off load capacities from 20m³/h to 170m³/h.**

Also available non submersible portable diesel engine powered type pumps with offload capacities **from 11m³/h to 600m³/h.**

PILLOW TANKS

These are foldable pillow shaped tanks for bulk liquid storage. Available accessories include ground pads, berm liners, inflatable secondary containment, fluid pumping systems, hoses, webbing tie securing systems, and repair kit.

Capacities range from 370 liters to 379 m³ (100 to 100,000 gallons) or large.

TRUCK / BOAT MOUNTABLE PILLOW TANKS

These are foldable pillow shaped tanks made for mounting on flat bed trucks. These tanks store liquids similar to the standard pillow tanks. Truck tank hold harness made of 5" reinforced webbing is included. Bed liners are also available.

SURFACE RESPONSE BAG

CANFLEX (USA) Inc. designed and produced the first ever “Surface Response Bag”, this was done in 1986. The Canflex Surface Response Bags are “Balloon” shaped semi-towable bladders designed to be used at a Shipping Port or Harbor for temporary storage of oil or light fuels that have been recovered by a skimmer.

The bladders then can be slowly towed to an area where the harbor crane or large dock crane is able to attached a hook to the bottom shackle and hoist it from the water.

The recovered product can then be drained out through the bottom fitting into a tank truck for removal from the site.

Each Surface Response Bag has two closed cell foam floatation panels for auxiliary buoyancy and stability. They also come with high strength Polyester webbing lifting straps treated with special coating to prevent against UV degradation. These straps are enclosed in protective sleeves attached to the body of bag. All the Surface Response Bags come with appropriate screw pin shackles , for single point lifting , attached to the top of the lift harness.

Capacities range from 1 to 10 m³ (246 to 2,460 gallons).

BEACH BOOM

These water ballast containment boom are used to protect areas exposed to tidal flow. The Beach Boom is manufactured with high strength coated fabrics and its ends are reinforced to avoid tearing. This units are collapsible and can be folded for easy storage and transportation. **Available any size**

DECONTAMINATION CLEANING STATIONS

These units are used for wash down and decontamination of equipment and personnel. Petroleum products, drinking water, industrial chemicals, waste water, liquid food products, and a wide variety of other liquid can be safely and efficiently wash down in the CANFLEX Decontamination Cleaning Stations. It includes the floor and the air inflatable sides. **Available any size**

HELI-LIFTABLE TANK

This tanks can be carried by helicopters to transport liquids to remote areas.

When empty , the unit collapses vertically to a fraction of its filled size.

Each tank has a total of four polyester webbing lifting straps attached to a appropriate screw pin shackle(s) with swivel , for a single point lifting.

Capacities range from 208 to 1890 liters (55 to 500 gallons).

OPEN TOP RESERVOIRS.

The open top reservoirs tanks are circular shaped with a low profile. (i.e. ratio of height to diameter is small for stability purposes) and a circular shape self flotation collar made of closed cell foam or air. These tanks are used for storage of oil, potable water, sewage, and other liquids. Available accessories include ground sheet, carry/storage bag, replaceable inner liner, top cover, and repair kit.

The Open Top Tanks are very light weight, reliable, fast response units requiring no frame set-up. These reservoirs are sturdier and more versatile than aluminum frame fabric tanks.

Capacities range from 2 to 57 m³ (500 to 15,000 gallons).
